

In the past 35 years our company gained a massive amount of knowledge and experience in the day to day operation and maintenance of all types of pellet mills. Both in the animal feed as well as the biomass industry we ascertained that there is a need for further improvement of these machines. We have taken the opportunity to utilize our knowledge and experience to develop a new pellet mill. The objective was to construct a pellet mill suitable and applicable for the production of pellets from both biomass as well as animal feed. Our technicians and engineers managed to design and construct the DMT Taurus.®

Solid and mighty pellet mill applicable for operation in the biomass as well as the animal feed industry. An insulated door with by-pass and large turning circle, grease reception bin behind the rotor and multiple knife positions. An ergonomic lifting traverse for dies and rollers with a V-Belt driven rotor. Ergonomic position of the lubrication unit, conical die fitting and a foodgrade coated rear plate. Use of water born paint technology by Perfect Aqua Line. It's got safety pin technology, is CE Certified and very easy to operate. The Taurus DMT 850-250-3 a mighty machine!
