

Dutch Milling Technology International (DMT International) is still a family owned venture based in Helvoirt (N-Br), the Netherlands.

Nowadays DMT International does have an international scope, with exporting activities to over 30 countries globally and a main focus on the animal feed and biomass industry. DMT International delivers complete turnkey projects as well as servicing, maintenance and refurbishment activities to the machines, installations and plants of its customers.

With a combination of new and completely refurbished machinery, DMT International's main objective is to deliver a sustainable footprint in the global animal feed and biomass industry. The craftsmanship of our service engineers together with an entrepreneurial approach towards the ever changing demands of our customers secures the high level of quality of our services, projects and machinery.

At DMT International's 5.500 m<sup>2</sup> warehouse and workshop we have access to a large number of equipment and spare parts for the animal feed industry, which is also applicable to the biomass industry. This includes transport systems such as: elevators, chain conveyors, screw conveyors, air valves, pneumatic slides and much more. A complete roller refurbishment line in our workshop as well as a rotor re-condition department completes the portfolio of the company.

DMT International has highly skilled and experienced mechanical engineers under its employ, whose craftsmanship secures a high quality and flexible solution to our customers.

**Roller refurbishment**

**Spare parts**

**Workshop**

DMT International offers a wide scope of service & maintenance for the major brands and types of pelletizers. From oil seals to V-belts and bearings, from changing roller-sets and dies to even a full refurbishment of your pelletizer. This service & maintenance can be executed at the site of the customer or, if desired, in our fully equipped workshop at our premises in Helvoirt, the Netherlands. At the premises in Helvoirt, DMT is in the possession of a semi – automatic roller refurbishment department, where mechanical engineers are able to refurbish all brands and types of rollers. Replacing of roller shells in any configuration as well as replacement of other parts such as roller bearings, oil seals, circlips and seal plates is executed accurately and cost effectively.

Besides pelletizers, rotors and rollers, DMT does keep stock of all kind of spare and replacement parts applicable in the animal feed industry as well as the biomass industry. Should our customers face difficulties in finding the right part for their machine or installation, DMT can quickly arrange the solution.
